

Managed Security Services

In today's digitalized world, companies of all types and sizes need to protect their critical data assets against breaches and intrusions.

Unfortunately most of them don't have the necessary time, money or resources to monitor their environment themselves. That's where a Managed Security Service Provider (MSSP) comes in.

As your Next-Gen Managed Security Services provider, Hitachi Systems Micro Clinic helps move the costly and time-consuming work of security monitoring out of your IT department, freeing you up to do the work of keeping your infrastructure in top shape. With 24/7 managed security services, you can improve your organizational security to protect your business and maximize ROI. Finally, you can focus on running on your business with the peace of mind that your environment is secured around the clock.

Our Services

Managed Security Services

Protect your critical data, monitor your environment for intrusions and respond to security incidents with 24/7 managed security services. Hitachi Systems Micro Clinic provides a full-scale Managed Security Service to allow you to protect your most valuable IT assets as well as your organization's and customers' data, while helping you meet the most stringent compliance requirements and internal controls. We operate on a two-tier model offering Core Services as part of our standard functionalities and Add-On services for special features.

Our managed security service is

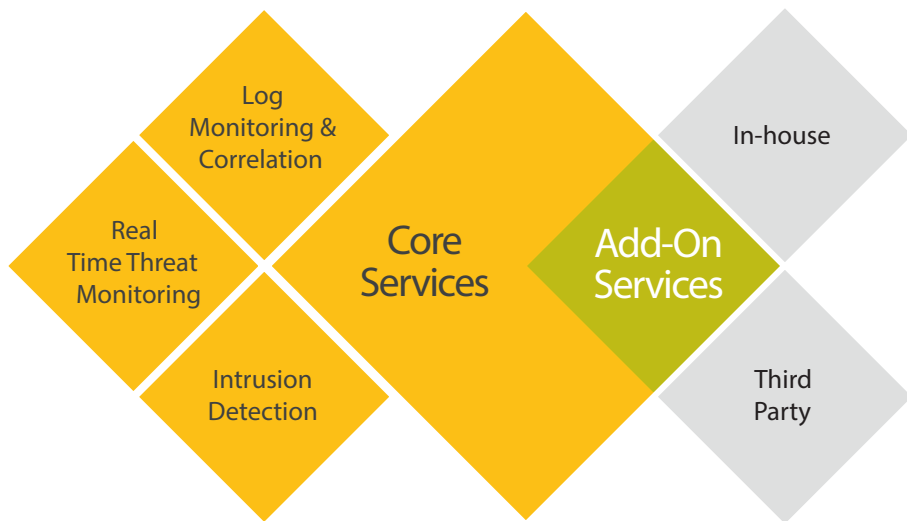

powered by ArkAngel platform – the single pane of glass through which you can view your entire organizational security posture at a glance. This platform unifies the various types of technical security data along with tools for translating those inputs into clear information about business risk, divided into relevant categories and scored with probability down to the individual asset level.

While many SIEM tools are purposely built to be generalized to any organization and thus require a year (or years, in certain cases) of configuration to tune properly, ArkAngel was

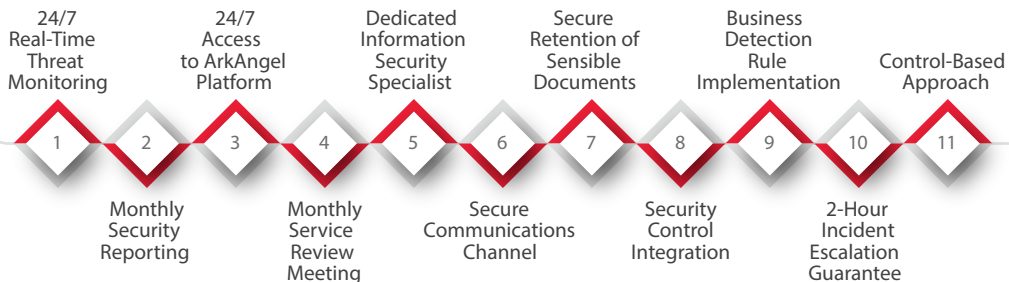

built specifically to support our own security practice. It integrates with virtually any existing security solutions. The end result is that we can be up and running within months, not years, and our team can catch any breaches that occur almost as fast as they occur instead of getting bogged down in an ocean of non-critical information.

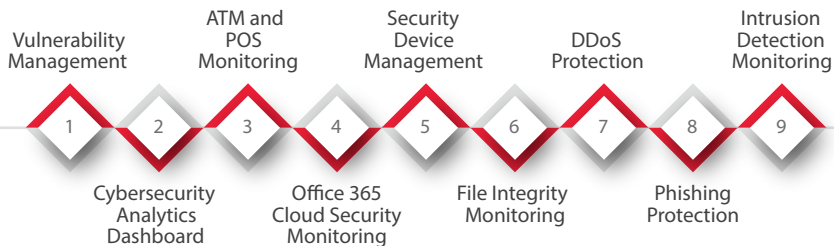

Managed Security Service Model

Core Services Elements

Add-On Services

What You Get

- ◆ 24/7 Threat Monitoring & Protection
- ◆ Security Posture Overview and Reporting
